

GuardPro Automated Guard Tour Systems

GuardPro Aries IV The Most Advanced And Reliable Guard Tour System In The Industry

ARES IV + M6000 Portable Rounds Recorders have the strongest probe head, are made using heavy duty construction and made with stainless steel.

EASY TO USE. The small, lightweight, durable tracking systems that ensure your personnel are making their rounds. Simply touch the M6000 recorder to the recording station "iButtons" and the location, date and time are recorded. The reader holds up to 5,461 transactions that can be easily downloaded to any PC running Pentium 11 (300MHz) or higher processor.

User Friendly

Expandable - You can add as many recorders and iButtons as needed, when and where you need them.

Secure – The M6000 recorder is made of touch reinforced polycarbonate. No need to worry about anyone tampering with the stored guard tour information. This heavy duty unit withstands rain, mud grease and dust.

Accountable – Produces detailed guard tour reports by downloading the data to a PC with the included download cradle and Windows-based software.

Practical – ARES Express offers simple rounds tracking at an attractive price. The advanced ARES IV system adds support for incident tracking with an optional incident pad.

Easy Data Download – A full download (5,461 transactions) only takes three minutes. You will be advised of the progress and function status. Simply place the M6000 on the docking cradle and the data will be transmitted to your computer.

With ARES choose from two different systems to meet your rounds tracking needs.

 10 year life, 5,460
 Recordings/recording cycle
 Power: 3 AAA alkaline 1.5 BDC
 Batteries, last one year of 500,000
 recordings
 Casing Material: 40 Glass
 Reinforced Polycarbonate
 (General Electric-Lexan)
 Operation Temperature: -40 to 85C
 (-40 to +185F)

ARES Guard Tour software is comprised of 10 folders that allow you to view and manage the data that is collected from the M6000 hardware. Simply click on the tabs to get to data folders: Header, Assignments, Recorders, Booklets, Messages, Recordings, Archiving, Password and About. Recordings show the Date, Hour, Name and Incident, Area, Messages and the Watchman that was handling rounds during that time frame. It is easy to sort, view and export data. Numerous professional looking reports can be generated to review.

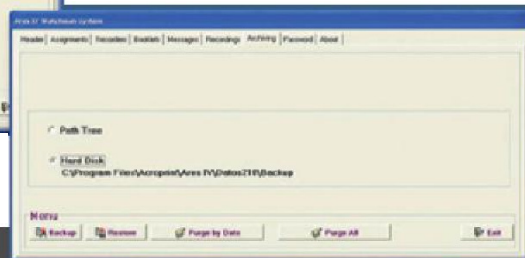

Multiple records can be set up on the system

Data collection is archived to be referenced later

Using the incident tracking pad, customize messages can be tracked. For example, at station 4 a water leak was reported

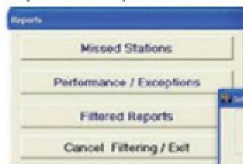

Additional Components:

Additional components are available to make your rounds tracking more efficient
 Additional iButtons, iButton mounts and iButton fobs
 Incident pad (works with ARES IV)
 Download Cradle
 T6000

ARES offers professional reports that can be exported to Microsoft Excel or other databases. You can customize the report header with your business name. Data can be filtered for specific reports

Select the type if report that you would like to create

Using the selection filter, insert the date range for your report data and the type of data that you want to review. The selection filter will automatically mine the data and compile the requested report

Recordings From 2007/05/22 To 2007/06/25 Filtered Recordings

yy	mm	dd	Hour	iButton Number	Name	Code	Area	Type
07	05	22	19:59	9C0000003286AC101	Watchman Black Key	2	N.A.	Watchman
